

Be a Hero: Help your company protect their digital backbone.

360° CYBERSECURITY FOR SAP

You don't need to combine different Security Solutions to protect your SAP landscape. SecurityBridge is your one-stop-shop combining all the benefits of a real platform approach to help you increasing your SAP security posture.

Unlike other solutions, SecurityBridge is a native SAP addon that lives inside the SAP platform itself. This means: no additional hardware needed, with a minimum system footprint. As it's intuitive to use it needs almost no setup training.

With SecurityBridge, you get the world's first and only 360° view on SAP cyber security – from threat detection to vulnerability management and compliance management – all in one platform and all installed in just a few hours.

PLATFORM HIGHLIGHTS

→ AUTOMATE AND SIMPLIFY VULNERABILITY MANAGEMENT

Detect SAP vulnerabilities and enforce the settings and configurations that are needed to meet compliance requirements.

→ PRODUCTIVITY BOOST IN PATCH MANAGEMENT

An intuitive user interface delivers all the information you need to evaluate the patching status of a system. SAP Notes are being enriched by additional meta-data that is essential to understanding the underlying risk and potential side-effects.

→ DETECT & REPORT EXPLOITS IN REAL-TIME 24/7

Benefit from filtering, correlation, and translation of raw technical logs, into context based actionable events. With this approach, SAP threat detection is significantly simplified. You get to see what is security-relevant and requires further follow-up.

TAKE BACK GOVERNANCE OF ALL SAP INTERFACE TRAFFIC

→ The Interface Traffic Monitor provides insight through an interactive communication map which automates and simplifies governance and identification of existing attack vectors, even in the most complex landscapes. This helps you to identify and eliminate unused interfaces and connections to reduce the attacker surface.

ONE PLATFORM HAS IT ALL

UNMATCHED USER EXPERIENCE

We are constantly improving our platform through customer feedback to provide not only the best-in-class functionality, but also a great user experience:

- Manage your tasks: Create an incident within the platform via drag n’ drop.
- Become an expert: Get context-based info on every finding through our knowledge base.
- At a glance: Modern dashboards provide you with all relevant data and correlations.
- Easy configuration: customize your system the way you want without additional programming or consulting.

INTEGRATE AND CONNECT

With our open platform you can link any SAP environment to any SIEM, SOAR, and Risk Management platform. We also offer a wide range of API’s and BADI’s to enable custom integration scenarios or bespoke requirements. Various integration options with IT service management software solutions are also available.

ABOUT SECURITYBRIDGE

SecurityBridge has become trusted by the world’s largest and most prestigious corporations. As our name implies, we are a bridge, a cybersecurity connection between our customers’ IT departments, the forward-facing business services, and their SAP applications. Our focus is on securing SAP applications and simplifying SAP security through a holistic approach – the SecurityBridge platform.

SPEED TO SECURITY - 3 STEPS

1. **Implementation:** hassle-free and quick. You get a system up and running within less than a day.
2. **Analysis:** switch on the light. We dig deep and scan your entire SAP landscape - as we know exactly what to look for.
3. **Success:** Fast results. We enable you with actionable insights to start improving your SAP security posture immediately.

“WE COUNT ON THE SECURITYBRIDGE PLATFORM TO ALERT US ON CRITICAL VULNERABILITIES WHILE AUTOMATING SAP RISK MANAGEMENT PRACTICES. OUR TEAMS NOW COMMUNICATE MORE EFFECTIVELY – SECURITYBRIDGE HAS BECOME AN ESSENTIAL PART OF OUR OVERALL CYBERSECURITY STRATEGY.”

Tony Parrillo | Global Head of Cybersecurity
Schneider Electric

DO FIRST THINGS FIRST

SecurityBridge helps you to systematically prioritize remediation measures and focus on efficiency and complexity. Detailed selection options make it possible to distribute tasks in the team based on criteria e.g. qualification and responsibility. Get recommendations that precisely match your SAP system architecture and have active progress control and overview of all tasks.
